

Zerion Software

SANDBOX ENVIRONMENT

The Zerion Sandbox creates a live or historic, on-demand snapshot of your production environment in a support sandbox to troubleshoot, test integrations, and modify forms. The Sandbox will include data, forms, and users. Users can also create multiple sandboxes from their production environment without disrupting live production forms or available data in their dedicated database.

Test Forms: Change and experiment on forms without affecting live users in the field.

Retrieve Lost Data: Access forms, data and users within the last 14 days.

Test API Integrations: Increased API calls allow for risk free testing of integrations.

Use Forms Created in Sandbox: Upload forms created in the Sandbox environment into your live account via the Form Packager.
